

The storm hit the FarmPlus production site.

In 2025, heavy winds destroyed the Farm Plus production site at SINA.

Work stopped, but Farm Plus did not.

Everything was lost.
All the production of
protein feeds using
black soldier fly
larvae was gone.

The co-founders
Jesca and Vicky kept
showing up.

First teh space had to be rebuilt

At the first and main
SINA Community
“Jangu international”
in Mpigi, Uganda, a
new space was built,
where the old one
collapsed.

Then a stronger and professional space became possible.

The team was able to secure an investment to graduate from SINA and move into their own space, about 2 km away and built a professional production site.

**More order.
More
protection.
More
production.**

Better conditions for
the larvae and for the
team.

**The work is
alive again.**

Black soldier fly
larvae turn organic
waste into value.

From waste
into animal
feed.

Nutrition for animals.
Income for youth.
Impact for the
community.

**Farm Plus is
growing from
here.**

A stronger space. A
stronger enterprise.
A stronger future.
